

1**Natural Oil**

Natural oil colors the surface and sustainably protects the wood from within.

**2****Polished Wax**

Creates a velvety, shiny surface and seals against moisture and dirt.

**GRIP****Improved Grip**

The finish becomes more grippy as the palm temperature rises.

Retro look and enhanced grip

The Fusion Series features a new type of surface treatment: the eye-catching, glossy retro look results from a specially developed two-step wax-oil process. First, a colored natural oil is applied, which soaks into the outer layers of wood, highlighting the grain and providing lasting protection for the material. Then, a polished wax layer adds gloss and reliable protection against moisture. The key advantage lies in the grip: thanks to the reactive surface behavior, the stick becomes even more grippy during intense sessions.

FUSION SERIES

Delicate in fast passages & powerful enough for punchy beats. The Fusion Series delivers perfectly balanced sticks with sophisticated performance features.

The Fusion series combines familiar handling with additional length for a noticeably balanced feel and an expanded dynamic range.

The sticks immediately feel familiar, respond faster, and appear playful and lively. The longer, slimmer shoulder provides pronounced rebound and a quick response on the drumhead. Ghost notes remain precisely controllable, fast figures play almost by themselves, and at the same time, the stick provides enough substance for powerful beats.

Typical for all Fusion models is the barrel tip. It produces a powerful, defined cymbal-sound with a clear presence.

5A & 5B FUSION

The 5A and 5B Fusion offer the familiar diameter of our classic models, but are slightly longer. With a slimmer, longer taper and improved balance, they deliver high rebound, fast response, and more playing possibilities. The sticks respond quickly to fast patterns, remain controllable, and confidently cover a wide range of moderate to powerful playing styles.

5AL & 5BL FUSION

Same diameter, extra length: The 5AL and 5BL Fusion both add 9 millimeters to the length of the 5A and 5B Fusion models, making them the longest sticks in the Rohema portfolio. The diameter remains the same as the familiar Classic 5A and 5B models.

The additional length shortens movements in the kit and makes fills more efficient to play. The double, two-stage conical shoulder ("balanced double taper") balances the center of gravity and ensures fast rebound and precise control. Compared to the other Fusion models, the 5AL and 5BL feel slightly more top-heavy.

Manufactured in the same weight class as the other Fusion sticks, their additional length gives them a little more mass, while remaining agile and precise to control.

7A FUSION

For those who like the 7A feel and want to try something new. At 407 millimeters (16"), the Rohema 7A Fusion is slightly longer than the classic model and has a slightly slimmer diameter. Well balanced, it retains the familiar 7A playing feel. Its slightly longer shoulder provides more rebound and a quick response. The stick reacts directly, feels light and offers precise control. This makes the 7A Fusion particularly suitable for delicate, finely nuanced playing styles, while still providing enough substance for simple, straight beats.
